

## Lil Li8 – Garden Water Feature Light

Illumin8's i8 garden water feature light is a stunning and dynamic feature to add to your pond or water display, it twinkles and glows at night to look like liquid gold and casts ever moving shadows and light around the nearest garden surrounding your pond or water way. It works best in a clean water pond environment and comes with a 12volt DC water pump and filters. The water and the light mingle together to create a scene that you won't find in most gardens.
